Current role	Care Coordinator at Angel Care Group LTD
Experience	Healthcare
Technologies	JavaScript, Python, jQuery, Excel, Bootstrap, NumPy, Pandas

Right now I'm learning…
Objective C and swift. I started learning this due to our mobile computing module however I find the challenge of objective C quite interesting and as much as people say it's a dead language, I believe equipping myself with the skill of being able to handle legacy code will make me stand out

Work experience

Care Coordinator, Angel Care Group LTD ⊞   Aug 2022 – Present (1y 8m)

Im part of the 8 office staff , 60 carers and 200+ clients
Healthcare

JavaScript   Python   jQuery   Excel   Bootstrap   NumPy   Pandas

- Joined Angel Care as a carer in August 2022 while pursuing my part-time Computer Science Bachelors (to complete in August 2024).
- Got promoted as team leader and then care-coordinator because of developing an auditing software.
- Developed the Angel Care auditing software that read all the care notes and indicated areas which needed immediate attention which in returned saved over 50 lives since deploy through pointing out signs of health deterioration that would have never been picked in time.
- Created a webscraping script to aid with care plan marketing using Python and Selenium which is aiding our 50+ carers
- Created Our Standard Operating System Worksheet with analysis of Clients data and Team data using excel, Python in excel, Seaborn and Pandas.
- Made our sister company's website using flask, bootstrap, JS, twilio api and uploaded it onto my GitHub.
- Managed (still manages) 12 team leaders and readjusts our Operating procedure.
- Carries out inductions and shadowing of new comers.

Education

University of Malawi

Bachelor's Degree Computer Science
- Part-time computer science degree ending August 2024
- Transferred from Nanjing Universitu of information science and Technology

Nanjing University of Information Science and technology   Aug 2021 – Jun 2022 (10m)

Under graduate (2.1) Computer science
- Began my B.com in China at NUIST however due to the pandemic. I had to stop and go back to Zimbabwe where I then picked up again with my current university

Snippets

Care company website (Parherssia Care) 🔗 **parherssia-care-prototype.onrender.com**
–My employer wanted to expand their business and assigned me to making the sister company website. I made their mock-up which is on hold due to procrastination of launch of the company
–Used booststrap for front end, flask for back end. Project is available on my GitHub.
–Used Adobe Ai to design the Svgs and animations with some Photoshop
–Took 3 weeks to deploy.
–Problems faced, due to the non-technical nature of my clients. I faced a great amount of ambiguity in what it is they wanted which pushed the project back. Lessons learnt: 'Ask many questions before even putting fingers on your keyboard'

More about me

I'm excited to work for a fast-growing company because...

I currently in such an environment. The company I work for may not be in the tech field however it is considered a start-up in the healthcare industry. Everything is fast pace and I am not only a care-coordinator, I am sometimes doing care work, accounting , line management and holding meetings. It's quite fast paced however I am used to that now

Right now I'm learning...

Objective C and swift. I started learning this due to our mobile computing module however I find the challenge of objective C quite interesting and as much as people say it's a dead language, I believe equipping myself with the skill of being able to handle legacy code will make me stand out

Interests

I enjoy weight lifting and surfing

Languages

English, Mandarin, Shona
